

Once you have your image edited the way you want it please prepare it in the following manner:

If the image is landscape (image is wider than it is tall) then the width should be 1600 pixels x 1200 pixels high.

If the image is portrait or square (image is taller than it is wide) then the height should be 1200 pixels.

If using a stroke line to make a border, put the stroke line on then resize the image again to ensure the pixels have not been added on. As a precaution make original 5 pixels smaller at 1.

Layers should be flattened and Save As a **jpeg** file with Maximum (12) quality setting.
Note: On Apple computers file name must end in **.jpeg**

Save file as per this example :- **Your Name--Image Title.JPG**

i.e. **Peter Phillips—My best image yet.jpg**

(This format is required to make your PDI image compatible with our competition software being used on our laptop).

email to: **mcilroydmcil@aol.com**
