Resize an Image with Specific Dimensions in Windows Photos for PDI Competition

1. **Open the photo**
   - Right-click your image file → select **Open with** → choose **Photos**.
2. **Open the Resize menu**
   - In the top toolbar, click the **three dots (…)** (More options).
   - Select **Resize**.
3. **Choose a size option**
     - **Custom dimensions** – set your own width and height.
4. **Adjust custom size**
   - Check that **Maintain aspect ratio** is locked.
   - Enter the **width (1600)** and **height (1200)** in pixels. If your image is a non-standard size, ensure that neither dimension is over the relevant limit.
5. **Save the resized image**
   - After choosing, click **Save resized copy**.
   - Pick a folder and file name (it won't overwrite the original unless you choose the same name/location).

Your images will now be exported as JPEG files with a maximum width of 1600 pixels and a maximum height of 1200 pixels.

You can now email your image(s) to pdi_secretary@haylingislandcameraclub.co.uk before midnight on the closing date shown in the programme.
